JRT-ETSD

Magnetic switches for emergency terminal speed-limiting devices.

Product description:

JRT-ETSD magnetic switches were developed for elevators operating up to 1000 feet per minute. They replace mechanical switches used in normal stopping devices and emergency terminal speed-limiting devices. The included mounting brackets can be quickly installed on the elevator guide rails and on the cabin's roof; no other parts are required.

Benefits:

- No noises during activation
- Eliminates roller and mechanical cam noises
- Simple adjustments on all axis
- Quick installation
- No maintenance required

Switches needed:

- 200 feet/min or less = 4 switches
- 250 feet/min = 6 switches
- 300 to 350 feet/min = 8 switches
- 400 up to 1000 feet/min = 10 switches

Technical support 24/7

Our qualified technicians assure you continuous support night and weekend.

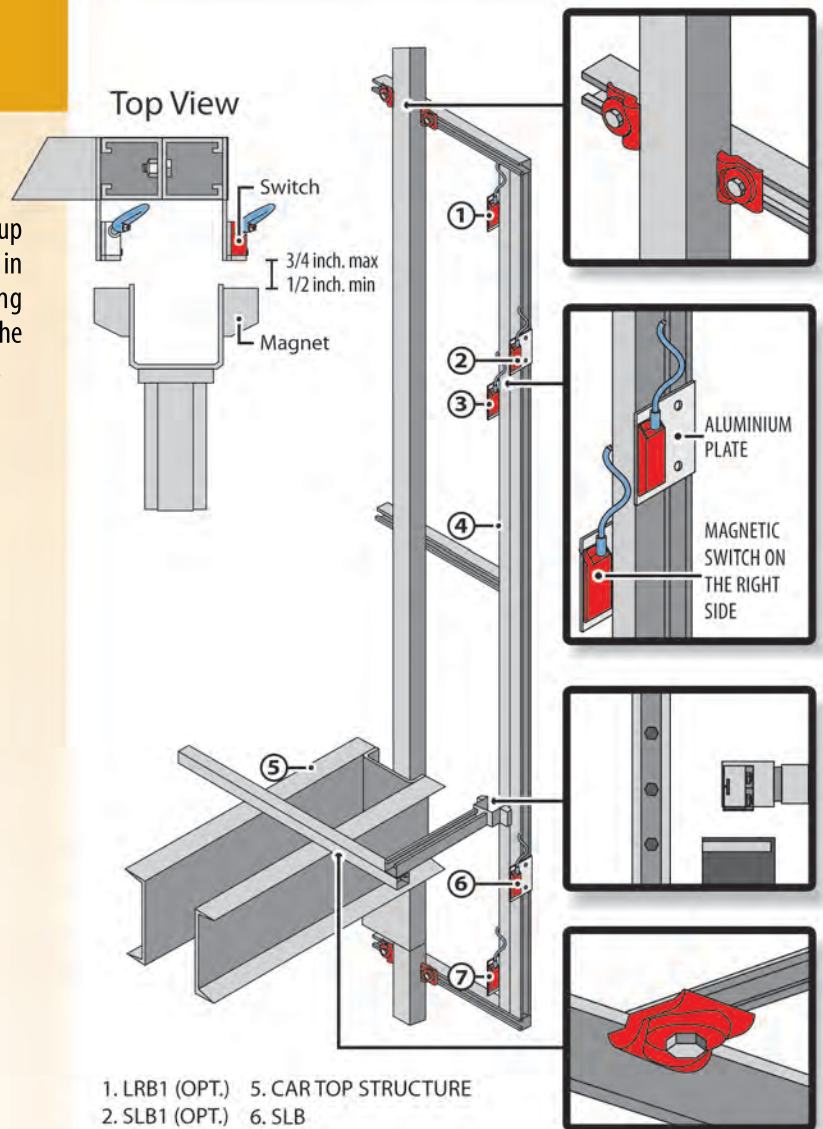

One of our strengths is to design and manufacture controllers which meet **your requirements**.

Non-proprietary

All our controllers comply with the A17.1/B44 elevator codes.

 certification, EN12016 and TSSA approved.
